

To whom it may concern.

Why so many windfarms for Powys, usually only a few seem to be working! do we have too much wind! we know electricity is needed but here theres plenty of rain to fill the rivers and lakes --- how about Hydro power. As for TAN 8 please update as its the 21st century now!!

the pylons that take the power to a hub then the national grid will need better roads for their transport the local roads are rough and narrow - then theres the bridges a local one near Newtown has been out of action for 2 years - so its a detour to get to Newtown - of course there are ambulances in particular Air ambulance which we see often here as we are 30 miles from a General Hospital. I could go on but I think you may have a gist of feelings round Llanfair.
