

22nd September 2011

To whom it may concern,

I wish to let you have our latest thoughts on the proposals after receiving the 'Project News' on the so called Mid Wales Connection.

The whole scheme is totally wrong for this delightful country side of mid Wales, I cannot believe that you wish to continue to fell trees and lay huge amounts of concrete across our green and pleasant land which is constantly subject to flooding and this is what you are planning. This is apart from the huge amount of cement the manufacturers will be laying which is very harmful in itself and the planners do not seem to have taken into consideration our road structure which will be under stress and damage with the large amount of traffic including transportation of the pylons It is really unbelievable that you are considering moving such transport on our far from adequate road system which must impede emergency vehicles, fire, ambulances and other necessary emergency traffic. The sooner the planners realise that laying the connection underground is in everyone's best interests the better.

I have enclosed our copy of the conclusions reached following our progress meeting in the Village the other night which, hopefully, will impress upon you the resentment we feel in the villages of mid Wales.

Yours sincerely

(D W AMOS)
