

Tuesday 20th Sept.

To whom it may concern,

I feel I must write to express my horror at the application put forward to erect wind turbines, pylons & a power hub in our beautiful countryside.

How can a project using so many tons of concrete & causing so much disruption & distress be described as 'Eco-friendly' or 'Green'? The cost of transporting materials & equipment

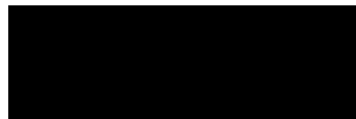

2

needs to be measured in the amount of distress this will cause as well as money. We hear about new jobs this would create but think of all the jobs this would ~~lose~~ for the area. Farming & tourism, two things Wales is known for, would be hit very hard, not to mention the impact on housing values. I have to ask how the situation has reached this stage before the general public & people whose livelihoods will be affected, have been consulted.

Has enough consideration been given to using the money involved to help households & businesses to erect Solar Panels to provide electricity for their individual needs?

Please support the people who, in good faith, elected you & in turn support them & respect their wishes, to keep Wales & all it has to offer, unspoilt. Farming & tourism will be permanently damaged, so will the government if this goes ahead.

Yours faithfully

(11/12)
