

20 Sept 2011

I would like to express my view on the proposed wind farms/hubs in my area.

No consideration has been given to the visual impact these huge pylons will impact on such a beautiful area. The wind mills themselves are not economically viable & the only people to benefit will be the 'fat cats' of the power companies who will be pocketing the subsidies given to them by the government. In other words we will be paying for it on top of despoiling our area.

No thought seems to have been given to the problem of transporting these huge turbines into the area. The nearest dual carriage way in the area

is Weerham bypass. Local people rely
on our small country roads to commute
to work & shop. When these main roads
are on the move everything else will be
at a standstill & that includes emergency
vehicles. I hope you are prepared to have
blood on your hands & face the wrath
on the local communities. I could go
on, but you know, down, deep down
that you are raping one of the most
beautiful areas in the UK. Open your
eyes, look around what you propose
to ruin & listen just this once, to
what the local people are telling you

Yours sincerely
D. Jones
