Inquiry on the use of anti-psychotic medication in care homes

Ymateb gan Fforwm Gofal Cymru

Response from Care Forum Wales

Consultation response –

Use of Anti-psychotic Medicines in Care Homes

1. Care Forum Wales welcomes the opportunity to respond to this call for information. We are a membership organisation for Health and Social Care Providers in Wales representing over 450 independent providers (both private and third sector), the majority of whom own care homes.
2. We promote excellence in practice in health and social care and have a number of expert leads in key areas, including dementia care. Steve Ford, our dementia lead, recently appeared on BBC's television programme, Eye on Wales, endorsing calls for the use of anti-psychotic medicines to be carefully monitored and reduced wherever possible, to enhance the quality of life of people living with dementia and to avoid unnecessary and harmful side effects, such as increased likelihood of falls.
3. Some of the first generation medicines have potentially serious side effects and have been largely discredited for use for people living with dementia. Some studies have shown increased mortality rates, incidence of stroke and cardio-toxicity. We believe that anti-psychotic medication should only be given as a last resort and, if it is appropriate, there should be a robust system of review every 3 months.
4. We are in the process of writing to our members to remind them of our campaign to be "A Champions" (Assessment of Challenging and Management Problems Initiating Options for New Solutions) and to re-issue guidance that we first issued in 2011.
5. We recognise that the responsibility for prescribing antipsychotic medicines rests with the GP and hospital psychiatrists or clinicians. However, it is often prescribed in response to the care team seeking to manage behaviours that challenge. We would rather urge care practitioners to seek individualised, creative and innovative interventions. The first step is to recognise and understand the triggers that cause this behaviour. The A Champions document includes a concise and practical checklist to help care practitioners to identify behaviours and likely triggers; to rate the level of incident and to find interventions that work for the individual. A copy of the document is attached at the bottom of this response.
6. We have worked previously with the University of South Wales in devising a dementia certificate for nurses to create better understanding of these issues. We are currently in

discussion about adapting the training materials to a format that can be shared and used by all care practitioners.

7. We would encourage providers and GPs to work together to review medication with a view to reduction and eventual elimination over a suitable time period, not forgetting the contribution that community pharmacists can make.

DEMENTIA CARE: 'A CHAMPIONS' DOCUMENT

Assessment of Challenging and Management Problems Initiating Options for New Solutions

Responsible care providers are committed to finding sensitive creative and individualized appropriate care interventions to safely manage behaviour that challenges, exhibited by service users with dementia, and thereby avoiding administration of antipsychotic medications as far as is practicable and safe to do so.

The elimination of or successful management of catalysts and identification of common denominators will inform care intervention strategies and promote problem resolution. Please tick the appropriate boxes, as relevant and complete the document which is designed to take no more than 5 minutes.

This document is suitable for use in all care delivery settings and can be completed by careworkers, carers, nurses or others providing care in hospitals, clinics, day centres, care homes, domiciliary care or care at home by family members or others.

Name of Service User.....
Date of birth.....
Type of care setting
Address
Date of Admission/Residency.....
Diagnosis.....
G.P.....
Other relevant agencies.....
.....

TYPES OF BEHAVIOUR THAT CHALLENGES

PHYSICAL AGGRESSION Please tick as appropriate.

Punch () Slap () Kick () Bite () Head butt () Squeeze () Pinch () Push () Spitting ()
Throwing objects () Describe object thrown..... Blocking others
movements () Throwing liquids () Stamping () Using items as weapons e.g. walking stick
() Describe.....
Other
Comments

PSYCHOLOGICAL BEHAVIOUR

Screaming () Shouting () Repetitive statements () Demanding () Loud behaviour ()
Unreasonable requests () Threatening () Intimidating () Swearing () Clapping ()
Other.....
Comments

SELF HARMING BEHAVIOUR

Hitting oneself () Scratching oneself () Pinching oneself () Using an object to hurt or injure oneself () Describe..... Threatening to hurt oneself () Verbalizing suicidal thoughts () Placing oneself on floor () Deliberately rolling oneself out of bed () Attempting to eat/drink non food objects () Describe..... Other..... Comments.....

SEXUAL BEHAVIOUR

Unwelcome sexual comments () Inappropriate kissing () Inappropriate touching () Fondling () Penetrating actions () Describe Exposing oneself () Use of sexual swear words () Masturbation in room other than bedroom () Identify Inappropriate flirting () Describe Other..... Comments

DESTRUCTIVE BEHAVIOUR

Damage to electrical appliances () Homes fixtures and fittings () Walls/wallpaper () Throwing objects () Please describe Throwing food () Trashing rooms () Identify which Shredding/Ripping items..... Other Comments

INAPPROPRIATE BODILY ELIMINATIONS

Urinating in inappropriate places () Describe location Defecating in inappropriate places () Describe location Manually handling/smearing/throwing faeces () Other () Describe..... Comments.....
